

MY DIGITAL FOOTPRINT

BY: MingZhen Li

My name's google search results

- When I searched up my name on the internet, I could not find anything. But, when I searched up Facebook user, it showed a few pictures of me that I posted in the past. Beside those, I was not able to find anything.
- Citation: Google

Describe at least three strategies that you can use to keep your digital footprint appropriate and safe.

- **First Strategy:** Beware of one's activity online. Knowing that sending something is like publishing forever. Also, be aware of the websites one visit because it will all be recorded. When commenting online, the messages should not be offensive, racist, or sexist.
- **Second Strategy:** Tagged pictures can aware my personal informations to someone. Fore example, if I post a picture with a tag, my location at a particular date and time will be aware to everyone. Therefore, I have to pay attention and consider about it carefully when I post. Also, is there are other people in the photo, I have to have a permission. If I do not, my friend's personal information will aware, too.
- **Third Strategy:** Think and doing the privacy setting is important. It can prevent your personal datas will share to someone. Smartphone is a personal device. Perform personal settings and consider the possibility of leakage of personal information from other applications.

Digital Permanence

- Simply put, digital permanence is basically how ways of storing data has developed and the permanence of digital data. It is how long data is stored for on digital media and ensuring how long the data can be held on media while staying viable. To a child, I would say: it's the lifetime of the things on internet. To a teacher I would use the above definition, and to a senior I would say: The data on internet can stay for example a year or even longer, it addresses the history and development of digital storage techniques. Thus, we should always be aware of what we put out there.

A DIGITAL FOOTPRINT EFFECT

- First, I think the digital footprint is data that is left behind by the user. When you are applying for job, it is crucial for people to see what you has posted in the past. They also can see what's you're interests, and other things. So, you should always be careful of what you post and what you write online for future purposes. Cause they can tell what's your personalities from your posters .Another thing that could happen is that you could start a career and later a video of a bad decision could come up and get you fired or get you in trouble. Seen a lot with political leaders.For example, if you have ever post something like smooking or being drunk. All these things will affect your job prospect.
